# QEQM Hospital deploys **aquavision** automated monitoring

“It was the ease of operation  
and the peace of mind that  
sold the system to me.”

John Wood, Facilities Manager

ACoP L8 compliance demands regular temperature monitoring across an estate's water systems, as does Health Technical Memorandum HTM 04-01. At the Queen Elizabeth The Queen Mother Hospital in Margate, Kent, someone had to manually test the temperatures throughout the hospital every month and log the results. Logbooks are open to damage and being misplaced, which could see the Hospital fined for negligence.

AquaCare approached John Wood, Facilities Manager at the QEQM with an innovative solution to the problem: **aquavision**. Developed by Radio-Tech, the **aquavision** system offers cost-effective water storage and delivery temperature monitoring, and meets current legislation requirements, storing data for six years for protection against negligence prosecution.

The QEQM has recently benefited from a major development programme, including a new children's ward and state-of-the-art cancer centre; it made no sense to continue manual testing. **aquavision** is installed throughout the hospital. Now John only needs to check the system online. He particularly likes the warning system: "When a temperature gets too low or too high, I get an email. With manual testing I would have to wait a month; by then it could be too late. I certainly wouldn't go back to manual testing." It really is that easy.

- Automated electronic logbooks eliminate human error and significantly reduce costs
- Wireless - 100% battery operated, no cables
- Maintenance free, reducing labour costs
- Web-based monitoring meets ACoP L8 legal requirements and eliminates need for back-office software
- Dynamic email or SMS alert generation; stored for six years for proof against negligence
- Weekly flushing limits Legionella growth
- Transparent and unbiased; solid basis for HSE audits
- Carbon friendly - reduced travel costs
- Peace of mind

**Every business needs to know its water is safe. Helping organisations like yours comply is our primary objective.**
