Water Hygiene

Your duty of care

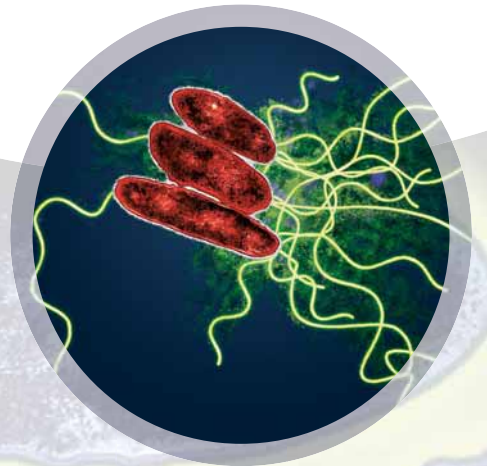

As the person responsible, you need to know the water in your buildings is safe. It's a legal requirement

Impure water causes expensive problems and inconvenience inside buildings. Of the potential impurities, Legionella is the most serious. If not properly controlled, it can spread rapidly, causing severe - potentially lethal - damage to health.

It is a common misconception that air conditioning is the primary source of Legionella but some 40% of the UK's outbreaks can be attributed to hot and cold water systems. The bacteria thrive at temperatures commonly found in poorly maintained air conditioning and hot water systems, showers, spa baths, whirlpools, feature fountains and swimming pools, and fire fighting such as sprinklers and hose reels.

There are heavy penalties for non-compliance with current Legionella control guidelines, not to mention the potential damage to the hard won reputation of any commercial organisation or public body.

Your legal duties include identification and assessment of sources of risk, preparing a scheme for preventing or controlling the risk and managing/monitoring the scheme. Let us help you ensure your water systems are absolutely safe.

We provide a comprehensive portfolio of services to help our customers meet the requirements of the Health and Safety at Work Act, the HSE's Approved Code of Practice L8 for the control of Legionella bacteria in water systems, and the Water Supply (Water Fittings) Regulations 1999:

- on-site water system risk assessments, complete with asset registers
- written reports - including pipework schematics and system details
- identification and prioritisation of remedial works to achieve compliance
- prioritised plan of control measures and remedial works
- prioritised programme of systems and storage cleaning and disinfecting
- planned maintenance and monitoring – fully costed
- identification of on-site personnel training requirements
- progressive efficiency improvement programme

Every business needs to know its water is safe. Helping organisations like yours comply is our primary objective.
